

PREMIUM EMAIL ARCHIVAL: YOUR EMAIL SAFE AND SOUND

Challenge:

You need a way to monitor, store, and retrieve messages going to and from your account. You also have to make sure that the entire process complies with federal regulations (e.g. HIPAA). You need redundancy in your storage, and you also need to be able to keep messages for long periods. It is not enough to make backups at night; you need messages to be archived in real time.

Solution:

With LuxSci's Premium Email Archival service, you get the security of knowing that you have a reliable product for complying with federal regulations. With this service, searchable, redundant archives are made automatically for both incoming and outgoing messages, in real time.

With Premium Email Archival you can:

- Comply with federal regulations
- Archive all inbound and outbound message in real time
- Easily search archives for keywords, senders, subjects, and more
- Store redundant copies of messages on separate servers and vault-stored write-once media

What is Premium Email Archival?

Premium Email Archival is LuxSci's solution for those who need a more secure, more permanent message storage method than offered by our basic services. Premium Email Archival offers immutable archives, with messages stored in multiple separate geographic locations and on write-once media. Premium Email Archival is ideal for those looking to satisfy federal compliancy standards.

How long can I store messages?

Message retention is based on your needs; packages allow retention for 1 year, 3 years, 5 years, or 7 years.

What do I have to do to archive messages?

After an initial setup period with our support staff to make sure messages are being properly routed, all archival will take place automatically. Messages are archived in real time, so you don't have to worry about deleting an email before it has been archived. Premium Email Archival will run to your specifications without any monitoring required on your part.

Who would be interested in this service?

Premium Email Archival is excellent for those who deal in finances, law, or healthcare, or for any public company, and have to abide by federal compliancy regulations. Businesses that do not have such requirements but want a permanent solution with searchable archives will also find that this is the best archival system for them.

Why should I go to a third party for this service?

Archival can be a tricky business for those not fully prepared for the stringent rules involving compliancy. By going to a third party, you are eliminating a huge IT burden. You also avoid conflict-of-interest cases that can arise when your own employees are responsible for archived email.

Protect your company with Premium Email Archival. Store every email, not just the ones still around at the end of the day, to geographically redundant servers and vault-stored write-once media.

Do everything automatically, so you don't have to work to make your emails safe. Let us bear the IT burden—not your staff. Even special requirements are not an issue.

Keep messages around as long as you need them, but still have easy access through our simple Search Portal, where you can search for any kind of keywords in the message.
