

SECUREFORM - SEAMLESS, SIMPLE, SAFE DATA COLLECTION

Summary:

Your organization wants to capture sensitive data online. You need a secure, simple, and easy-to-implement solution that meets compliance guidelines such as HIPAA. The information captured via website form (HTML) or a PDF form that is downloaded and filled out, must be submitted in a secure, organized manner that is both transparent and intuitive to the end user.

LuxSci's SecureForm:

- Captures data from website HTML forms or PDF forms hosted anywhere (*including uploaded files*)
- Collects data in email messages in one or more formats: plain text, CSV, pre-filled HTML or PDF templates
- Saves data as CSV file to WebAides Documents, LuxSci's file storage service; optionally encrypt entries and/or receive notification by email of new posts
- Does not require: SSL certificate, special software, or website hosted with LuxSci

How does LuxSci SecureForm work?
